0. ABOUT US

LA POCIÓN DEL BRUJO

Produced by CANNABOOM S.L.

Cannaboom S.L. is a company founded in 2005 with more than 20 years of experience dedicated to the manufacture, research, and distribution of fertilizers.

Day by day we are growing, thanks to our sacrifice and care in researching and manufacturing the products so that each of them gives a spectacular result in the plants, according to their function. We don't settle for our brand are one more of the market, our interest and effort is to be the best in the sector: we offer products directly from the factory with the maximum quality and the best price. We put at your disposal the advice of our experts.

We have made an improvement and purification of our design, to give a modern touch and adapted to a minimalist and elegant style, looking for a simple line but without losing our essence.

1. BASIC LINE (AMATEUR)

RAIMIL – MORE ROOTS 1000ml – 5000ml

Base root fertilizer that serves to continuously increase the number of mother and secondary roots, getting white and healthy roots. Ideal also for cuttings, newly germinated or transplanted plants and newly poorly developed plants. This product also strengthens the plant against fungal attacks of root and facilitates the assimilation of nutrients.

Soil: Apply 2ml/1L of water - Coco and Hydroponic: Apply 1ml/1L of water - From germination to the 4th week of flowering. It is advisable to correct the ph.

BOOM RAPID – GROWING 1000ml – 5000ml – 15000ml

Base fertiliser for growth, easily assimilated by the plant. Allows healthy growth with good plant development, preparing the plant for a productive harvest. Composed of specific minerals and organic materials for this stage of cultivation. Essential nutrients of high quality macroelements and chelated trace elements, fully soluble in water, obtaining more buds, better greenery, and more vitality.

Soil: Use 2ml /1L of water - Coco and hydroponic: Use 1ml /1L of water - From the 2nd to the 3rd week of growth. It is essential to correct the ph.

FLORABOOM – BEGINNING OF FLOWERING 1000ml – 5000ml – 15000ml

Base fertiliser for flowering, easily assimilated by the plant, particularly suitable for the start of formation of buds. Compound of organic minerals and materials, essential nutrients from macroelements and chelated trace elements which are fully water soluble, for obtaining more flowers, maintaining the greenery and strength of the plant. It can be used in any type of crop, earth, coco, and hydroponics.

Soil: Use 2ml/1L of water - Coco and hydroponic: Use 1ml/1L of water - From the 1st to the 5th week of flowering. Essential to correct the ph.

REVIENTA COGOLLOS – EXPLOSIVE FATTENING 600ml – 1150ml – 5000ml

Revienta Cogollos Basic is a fattening stimulator that acts by increasing the size of buds. Using it when flowers are already formed, we will obtain more calyxes which will fatten and tighten the buds. We will have large, hard, heavy buds. Its formulation incorporates two types of algae and different types of enzymes, all along with a high level of PK.

Soil: Use 2ml/1L of water. Coco and hydroponic: Use 1ml/1L water. From the 3rd to the 6th week of flowering. Essential to correct the ph.

2. FULLCREM LINE (EXPERT)

RAIMIL FULLCREM - THOUSANDS ROOTS

100 ml. - 300 ml. - 600 ml. - 1150ml. - 5000ml.

Raimil Fullcrem is a cream formulation (laminar suspension) which allows us to produce a highly concentrated product, obtaining better results, continuously increasing and reproducing the number of mother and secondary roots, making large root balls visible even above the substrate, obtaining thick, long, white, healthy roots. The plant will thereby better assimilate a greater quantity of nutrients. We will thereby obtain a well-structured plant with excellent growth and splendid flowering which is a joy to view.

Soil: Use 0.2ml/1L of water. Coco and hydroponic: Use 0.1ml/1L of water. From the germination to the 4th week of flowering

BOOM RAPID FULLCREM - LEAFY PLANTS 1000ml – 5000ml

Growth stimulator, formulated in a cream, containing a high concentration of NPK and also providing the main trace elements for the plant in chelated form. It can be used in all cycles of cultivation, increasing the plant development, and obtaining taller and thicker plants with more branches. Thanks to its formulation in laminar suspension, it allows us to add more natural organic materials regulating the development and sprouting, generating a stronger, greener plant with more balanced growth as a result.

Soil: Use 0.5ml to 1ml / 1L of water - Coco and hydroponic: Use from 0.2ml to 0.5ml / 1L of water - From the 2nd to the 3rd week of growth.

FLORABOOM FULLCREM – BEGINNING OF FLOWERING 1000ml – 5000ml

Cream bloom stimulator created in laminar suspension, generating a type of formulation that allows us to manufacture a much more complete product, with materials that contain a higher percentage of richness. Among them are a high NPK and microelements enriched with several types of enzymes, marine algae, and root biostimulators.

Soil: Use 0.5ml/1L of water - Coco and hydroponic: Use from 0.2ml to 0.5ml/1L of water - From the 1st to the 5th week of flowering.

REVIENTA COGOLLOS "RED BOOM" - EXPLOSIVE FATTENING

100 ml. - 320 ml. - 600 ml. - 1250ml. - 5000ml

It is a very complete concentrated cream formulation which acts by stimulating fattening, aroma, flavour, weight, hardness, and sugars of the bud, with amazing harvest results in quality and production. It is much more than a PK because in addition to nitrogen and a high level of PK, its composition contains a set of natural activators, forming a chain of links between all elements of its composition, performing a very complete nutritional function, and facilitating the assimilation of NPK, increasing its great potential in the plant, and achieving great harvests for professionals.

Soil: Use 0.5ml/1L of water. Coco e hydroponic: Use 0.2ml to 0.5ml/1L of water. From the 3rd to the 6th flowering week.

TERPENUM – MORE TRICHOMES

100 ml. - 600 ml. - 1150ml. - 5000ml.

Excellent enhancer to force the plant to produce the maximum of trichomes. It gets a rain of terpenes, fixing a large layer of resin and impregnating buds and leaves, making them fully usable. Achieving flowers of great hardness and maximum flavour. Advance the harvest by about a week.

Add 1ml for each litre of water, in the last 4 weeks of cultivation. If you double the dose in the last 15 days will get to advance the harvest by about a week.

3. ROOTING AND CLONING

RIZOCLON – GROWTH ACTIVATOR 50ml

It is a natural combination (HORMONE-FREE!) of various specific families of bacteria, microorganisms and amino acids which colonise in the jiffy, activating the growth of the root and forming a strong structure in the cutting, and a better mass of roots.

Use 0.2ml/1L of water, immerse the jiffy or rock wool in this solution.

KEJESTRON - VITAMIN BOOSTER 250ml

Natural vitamin stimulator (HORMONE-FREE!) for leaf application. Acts by invigorating and accelerating the growth of cuttings with strength and an intense green, after having been rooted with CLONADON, forming a better mass of roots in less time. When we observe that the leaves are green and upright, it shows that the cutting is well rooted and in perfect condition for obtaining a great productive plant.

Spray the mother plant 10 days before obtaining clones. Spray a second time 10 days after the cutting of clones.

CLONADON 95ml – 300ml

Clonadon is a 100% natural product created for the rooting of cuttings, formulated from gel so that when submerging the cutting, the product remains stuck and attached with all its properties. Composed with natural plant extracts, combined with trace-elements with a group of vitamins and amino acids, making it an extraordinary cutting cloner for demanding professionals. Additionally, its composition also incorporates elements with a protective action against root diseases.

Submerge two centimetres of the stem of the cutting in the gel and then plant in rock wool or jiffy; the gel will remain stuck to the stem during the whole rooting period.

4. VITAMINS AND ACCELERATORS

POCION VIT - FLOWERING ACCELERATOR

1000ml

It is a highly concentrated natural bloom bio-accelerator with beneficial microorganisms for intracellular action, promoting and stimulating flowering, forming a larger number of buds on the branches, conditioning the plant so that it better assimilates nutrients and enhances the effects of fertilisers rich in PK, resulting in harvests with greater production and better quality.

Soil: Use 2 ml/L of water. Coco and hydroponic: Use de 0.5 a 1ml/L of water. Apply from the 3rd week of growth to the 3rd week of flowering. It is essential to correct the ph.

BRUJO-VIT - SUPERCONCENTRATED VITAMINS

100ml

It is a complex of concentrated vitamins and L-amino acids which helps the plant in all cycles from the stage of rooting to growth, pre-flowering, flowering, and fattening and can be applied from the first 10 days of the plant's life. Not containing any type of salt, we will have no problems in fertilisation, as it facilitates the assimilation of nutrients to obtain larger, harder, and better-quality fruits. Upon application of the product, it is quickly appreciated that the plant is strong and full of energy with large green leaves, stronger growth, and earlier flowering, and facilitating the assimilation of NPK to obtain large, heavy buds. It helps to support the stress of the plant in transplants and forming new roots. It stimulates the production of chlorophyll.

Apply 1ml/75L of water from the 2nd week of growth to the 7th week of flowering. It is advisable to correct the ph.

VITA BOSS - VITAMINS FOR THE FATTENING PHASE

1000ml – 5000ml

Vitamin complex specific for the flowering stage. Its composition includes enzymes, stimulators of marine origins, promoters of flowering, and vitamins B1, B2, B3, B5 and B6. Helps improve and optimize the results of PK fertilizers, obtaining better flowers and fruits.

Soil: Use 2ml/1L of water. Coco and hydroponic: Use 1ml/1L of water. From the 2nd week of growth to the 7th week of flowering. It is essential to correct the ph.

5. COMPLEMENTS

CANNIBAL (POTION 1 AND 2) - NUTRITIONAL MULTIPLIER 280ml X2 – 600ml X2 – 1000ml X2 – 2100ml X2

Cannibal 1 and 2 are two powerful nutritional multipliers, 100% organic, which used together in the same irrigation stimulate plant growth and provide various types of microorganisms. Facilitates assimilation of all kinds of nutrients that you provide to plants, allows to reduce the application of chemical fertilizers. During the growth phase fortifies the branches and stem, during the flowering phase multiplies the number of productive branches, increases production with any table.

In the 1st week of growth 0.1ml/L of each potion. In the 2nd and 3rd growth week 0.3ml/L, in 1st and 2nd flowering week 0.5ml/L. From 3rd to 5th flowering week 0.7ml/L., and from the 5th to the 7th week of flowering 1ml/L of both products.

BIOTONEX F1 - SUPER BLOOM STIMULATOR

100ml - 600ml - 1250ml - 5000ml

It is a powerful bloom stimulator very concentrated. Its main functions are favour the development of shoots with a shorter internodal distance, encourage the formation of more buds, increase lateral branches, induce the change from growth to thickness, and increase the size of leaves and flowers. It also facilitates a better assimilation of nutrients such as NPK and micronutrients and improves the quality of the fruit. Can be used in all types of crops.

Soil: Use 0.1 to 0.2ml/1L of water. Coco and hydroponic: Use 0.1ml/1L of water. From the 3rd week of growth to the 6th week of flowering.

MORE GRAMS – DRYING ENHANCER

100ml - 300ml - 500ml - 1150ml - 5000ml

Unique formula in the world, launched by Cannaboom. Allows your harvest to lose little weight in the drying process. Are you tired of having a large harvest, then being disappointed in the drying process when you see that it has been reduced to nothing, losing over 80% of its weight? MORE GRAMS acts by filling the interior of flowers with plant fibre, starch and protein, transforming part of the water inside the bud into mass. You will also note that as the days pass, in the drying process, buds will be fuller and tighter. You will enjoy the results very quickly, as the drying time is accelerated, keeping their aroma intact and enhancing their flavour.

Soil: Use 2ml/1L of water. Coco and hydroponic: Use 1ml/1L of water. Use during the last 2 weeks of flowering. It is essential to correct the ph.

ROCA BOOST – FINISHER

100g - 400g - 800g - 2000g

Powerful finisher that acts in the fattening and hardening of the flowers. It gets that the harvests are of more weight, therefore, more profitable and of high quality. Increases the production of sugar and essential oils. In its composition incorporates natural elements of Asian origin and silicon 100% vegetable. This product acts mainly on the enterobacteriaceae and solubilizing agents, which act on the salts that are grouped in the roots and prevent perfect nutrition.

Use 1g/l in the last weeks of flowering. If you are an expert grower, you can reach the maximum EC reflected in our tables, in this week it is advisable to use it alone. Use 0.5/l from 5th to 8th week flowering together with other fertilizers that correspond in those weeks of flowering without exceeding the EC indicated on our tables.

SUPER BOOM COMPACTOR – THE BEST COMPACTOR

140g - 390g - 1390g

Composition of organic natural materials with biological nutritional action for therapeutic use, with elements never used in this sector by any other brand in the world. With this product you will get: larger flowers with more resin and sugar, visible results from the second irrigation, full and hard flowers with greatly increased weight, greater aroma and essential oils, contribution of enzymes, activating and increasing the enzymatic processes of the plant, explosion in profits at the end of your harvest, speeding up harvests by 7 to 10 days with greater ripeness, enhancing the flavour of the fruit and the results of PK, strong and natural, compatible with any other type of fertiliser.

Use Super Boom Compactor from the 4th to the 9th week of flowering with a dose from 0,5 to 1g/L of water. Use two or three times a week. Can be used alone or with other flowering nutrients. Suitable for use in soil, coco, and some hydroponic system cultivations. Essential to correct the pH and reach the appropriate EC.

BLOOM RIDER – FINISHER COMPACTOR

100ml - 600ml - 1250ml - 5000ml

It is a Finisher/Compactor formulated with high raw materials quality with biological nutritional action, commonly used in the food and therapeutic sectors. Among its components are proteins of marine origin, organic silicon, plant enzymes, nitrogen, animal protein, vitamins (B1, B2, B6), zinc, boron, and manganese among many others plus, being used right after the PK, obtaining flowers of a large size and weight.

Soil: Use 1 to 2ml/1L of water. Coco and hydroponic: Use 0.5 to 1ml/1L of water. Use from the 6th to the 8th week of flowering. It is essential to correct the PH and the EC in each irrigation.

BOOMERANG – EXTRA ENERGY

1000ml - 5000ml

It is a revitalising, vitamin-rich nutritional supplement of top-quality pure organic material, very important for having explosive cultivation for demanding professionals. It provides the strength and energy of the bull's blood, rich in organic chelated iron (1250 ppm), amino acids and organic nitrogen which the blood contains and enzymatic hydrolysed proteins which provide a double supply (rebound effect). Applying the product by irrigation of roots, it is absorbed very quickly with 100% assimilation, directed inward through the sap of the trunk, branches, leaves, pistils, and buds. Additionally, it implants several beneficial microbes in the substrate, which eliminate soil pathogens, promoting and accelerating the transformation of nutrients for better absorption of organic materials, microorganisms and the bacterial flora located in the rhizosphere, being a continuous source of nutrition for the plant between irrigation, enriching and improving the conductivity of the soil in a laevorotatory manner with the properties of the blood.

Soil: Use 1ml to 2ml /1L of water. Coco and hydroponic: Use 0.5ml to 1ml/ 1L of water. From the 2nd week of growth to the 7th week of flowering. It is essential to correct the pH and EC in every irrigation.

BRUTALZYM - PROMOTING THE ABSORPTION

1000ml - 5000ml

It is an organic nutritional supplement which must be used during the whole cultivation. Rich in fish hydrolysate, enzymes, carbohydrate, humic and fulvic acids, plant honey, protein, and natural vitamins which. Combined with the fertiliser of each cycle in the same irrigation water, provides full nutrition for the plant. You will obtain a well-structured plant with fruits which have an excellent scent and a natural flavour. It facilitates the absorption of mineral fertilisers and unblocks saturated roots. It is ideal for growers who love natural products.

Soil: Use 1ml to 2ml /1L of water. Coco and hydroponic: Use 0.5ml to 1ml /1L of water. From the 3rd growth week to the 6th flowering week.

TH-9 – ORGANIC BLOOM STIMULATOR

600ml - 2000ml - 5000ml

Organic bloom stimulator free of phytotoxic substances. It is developed to provide different organic materials than most conventional fertilizers do not carry in their composition. Due to its formulation in natural pure matter is achieved to have a plant vigorous, intense green and with more buds. Facilitates assimilation and enhances the effects of nutrients such as PK to be used thereafter, resulting in flowers with more resin and a more abundant harvest.

GOMA 2 - PROTEINS AND CARBOHYDRATES

100ml - 600ml - 1250ml - 5000ml

It is a source of protein and mucopolysaccharides (complex carbohydrates), shark cartilage, organic silicon from bamboo cane and calcium from marine coral. Its main function is to prevent water stress making the plant more resistant to pests and diseases, causes the appearance of more knots, with thicker and woody trunks and stems, therefore, the plant assimilates better and more amount of nutrients.

Soil: Use 0.2ml/1L of water. Coco and hydroponic: Use 0.1ml/1L of water. From the 3rd growth week to the 6th flowering week.

PETACOGOLLOS – MINERAL PK

400g - 1000g - 2000g - 5000g

It is an original mixture of select high quality nutritional minerals. Formula composed to provide large production with a high level of phosphorus (P) 50% and potassium (K) 40 %, in chelated form with high solubility for use in the flowering and fattening stages, easily assimilated by the plant; it is a 2 in 1. Phosphorus is essential for strengthening the formation of cells in flowers in the flowering phase. Potassium is essential for increasing the weight and production of sugar in flowers.

Use 0.5 to 1g/L of water. From the 3rd to the 7th flowering week, twice a week. It can be mixed in the same solution with fertilizers of other brands, provided that the measurement of the EC and the pH of the final solution is controlled

6.FLAVOUR AND AROMA ENHANCERS

MAXISUGAR- SWEET FLOWERS

1000ml – 5000ml

It is a supplement of simple and complex carbohydrates and plant extracts for food use, as necessary for your cultivation as for the human body. They provide a great source of energy, carrying out a multitude of positive functions, fattening your buds. Additionally, the plant will be stronger against extra erosion, having a reserve of carbohydrates within, which along with the fertilisers of each cycle, contributes to better flowering and more compact, sweeter fruits filled with more juice, more resin, more and better aroma and flavour.

Soil: Use 2ml/1L of water. Coco and hydroponic: Use 1ml/1L of water. From the 1st to the 7th flowering week. It is essential to correct the ph.

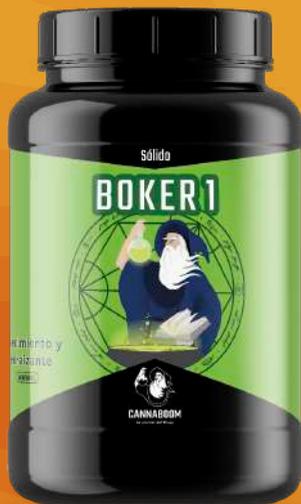

ALGAMIEL - MICROORGANISMS

1000ml

It is a 100% natural biotrophic mixture rich in protein, carbohydrate, vitamins, glucose, and enzymes which produce beneficial microorganisms in the rhizosphere, enriching microfauna by creating plant root symbiosis to allow easily blocked mineral elements to be assimilated, creating beneficial bacteria in the tissue of growth, improving results in growth and flowering, and producing glucose in fruits in the fattening stage.

Soil: Apply 2ml/1L of water. Coco and hydroponic: Apply 1ml/1L of water. From the 2nd growth week to the 6th flowering week.

7. SOLID LINE

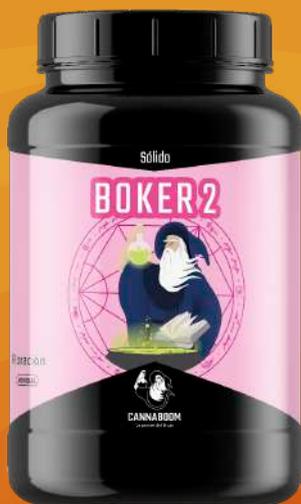

BOKER 1 – GROWTH ENHANCER AND ROOTS BOOSTER

600g - 2000g

Boker 1 is a growth enhancer and roots booster (2 in 1). Performs the most important functions of the plant, in addition, get a great structure, height, width, with good branching and an abundant mass of roots.

Apply from the 1st to the 3rd growth week. Use from 0.5 to 1g/1l of water, 1 or 2 times a week.

BOKER 2 – BETTER BRANCHING

600g - 2000g

Formulated to use from photoperiod change growth until halfway through flowering. Keep green plant and helps to create a better branching and a greater number of flowers. Rich in NPK and Microelements.

Use 0.5g to 1g. / 1L of water. Apply from the 1st to the 4th week of flowering 1 or 2 times a week.

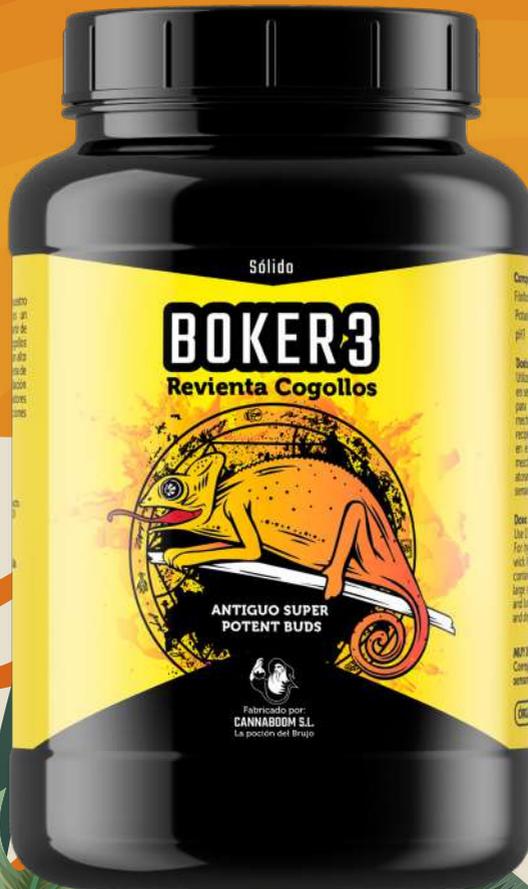

BOKER 3

SUPER POTENT BUDS

400g - 600g - 2000g - 5000g

Boker 3 is an evolution of the legendary composition of our old Super Potent Buds. It is a very complete, strong concentrated formula which acts as a fattening stimulator. It is much more than a PK, as in addition to a high level of macroelements, its composition incorporates a set of natural activators forming a chain of links between all elements of its composition, which perform a very complete nutritional function, facilitating the assimilation of the PK and increasing its potential results. Plants are leafier and stronger, with thicker stems, branches, leaves and trunks, better roots, greater production, hardness, weight, aroma, volume, and flavour. The results are visible the day following application of the product.

Use 0.5 to 1g /1l of water. Apply from the 3rd to the 7th flowering week, once or twice a week.

8. CORRECTORS AND FLUSHING

PH DOWN 1000ml

PH DOWN is a phosphoric acid (triprotic) specially designed to lower the pH of liquid solutions. Use 0.2 to 0.4 ml per litre of water depending on the pH to be reached.

With 1 liter of PH DOWN we will get approximately 5,000 liters of water with corrected pH. PH DOWN is a zero-residue product.

RAISANA – SUPER FLUSHING 1000ml. - 5000ml.

Final cleaning complex which eliminates the salts grouped in the root. Generates enzymes, reproduces new roots producing microorganisms and reduces stress by over-fertilization. Removes all kinds of waste substances accumulated in the substrate. Strengthens the tissue walls of stems, branches, and flowers, solubilizes salts grouped in the substrate and roots. Oxygenates the plant and facilitates the absorption of nutrients.

Soil: Use 2ml /1L of water. Coco and hydroponic: Use 1ml /1L of water. During the 3rd growth week and in the flushing phase to clean the roots before harvesting.

VIVEN BLOOD - CORRECTOR 1000ml. - 5000ml.

It is a very effective natural preventive and curative shock corrector which acts against any type of deficiency, resolving your problem radically in very few days. It combats and corrects ferric chlorosis and lack of microelements. We advise using it in all irrigation along with Brutalzym, providing animal and plant vitamins, protein, and phosphorus, humic and fulvic acid, algae, plant honey, etc. With Viven Blood, we provide all microelements necessary for the plant, completed in each irrigation along with the NPK.

Soil: Use 2ml/1L of water. Coco and hydroponic: Use 1ml/1L of water. Apply throughout the life of the plant.

VERY GREEN - IRON CHLOROSIS CORRECTOR 1000ml - 5000ml

It is a group of natural materials lined in a very efficient chain, specifically to correct ferric chlorosis (iron deficiency) among other functions. This mixture contains Iron, amino acids, enzymes, humic acids, fulvic acids and plant honey, combined to cover and quickly repair this type of deficiency that plants usually have during cultivation. It re-establishes dead and withered plants, activates the microflora and microfauna of the soil, increases the cation exchange capacity, chelating nutrients. You will have plants with a very intense, uniform green.

In curative mode use 2-3 ml/L of water 2 times per week until see that the plant is recovered. Once the deficiency is solved continue with 1ml/L of water as preventive and fortifying.

9. PROTECTION AGAINST INSECTS AND BACTERIA

BANG X1 75ml, 600ml

Valid for organic farming. Nutritional protector formulated with forest and desert plants. It does not leave toxic waste, it acts by stopping and regenerating damage caused by insects, whitefly, aphid, and thrips.

Curative mode: from 5 to 10ml/L of water, nebulize every 5 days.
Preventive mode: 5ml/L of water, nebulize every 15 days.

BANG X3 75ml, 600ml

Valid for organic farming. Nutritional protector formulated with forest and desert plants. It does not leave toxic waste, it acts by stopping and regenerating damage caused by mites.

Curative mode: from 5 to 10ml/L of water, nebulize every 5 days.
Preventive mode: 5ml/L of water, nebulize every 15 days.
Safety period after application: 10 days MIN, 15 days MAX.

BANG X5 75ml, 600ml

Formula composed by a group of natural lipids food with fungicidal effect that acts metabolically with self-defence of the plant. Formulated with forest and desert plants. Prevents and avoids damage caused by various types of fungi, Oidium, Botrytis, Mildew

Curative mode: from 5 to 10ml/L of water, nebulize every 5 days.
Preventive mode: 5ml/L of water, nebulize every 15 days.

MORTEM 335ml

Mortem is a full discharge insecticide bomb for all kinds of insects, makes a total disinfection of your crop quickly and easily, thanks to its direct discharge with incredible efficiency. Multi-purpose insecticide with high impact and penetration capacity in affected areas. Also known as automatic mist smoke bomb. You can apply this product in any buildings or room, establishments, means of transport etc. Single-use product

10. ODOUR CAMOUFLAGE AND NEUTRALIZERS

Natural essences super concentrated, long duration effect.
Camouflage and/or neutralize each type of odour in
garages, cars, closets, and clothes.

SENSI BLUE- NEUTRALIZATOR

12ml, 100ml, 250ml

Captures any odour molecule and
instantly neutralizes it.

CHERRY (cereza)
12ml, 100ml

BUBBLE-GUM (chicle)
12ml, 100ml

WATERMELON (sandia)
12ml, 100ml, 250ml

STRAWBERRY (fresa)
12ml, 100ml

LEMON (limon)
12ml, 100ml
