

This step-by-step plan gives an idea of how you could grow with the Stimulant-Pack. It is only a guideline, there are many ways to grow.

TRY-PACK™ STIMULANT

Do your plants seem rather lacklustre and in need of a boost? When you want bigger plants, sweeter tasting fruit and fantastic results, try the Stimulant-Pack. It is designed to be easy to handle and makes it simple to gain experience using the Biobizz® range of organic fertilizers.

If you're growing for the first time, just stick with the products in this pack. Get experienced, learn to understand the plants and keep it simple. When in doubt, go easy. The second time you can add the products we mention as optional. Results may vary since every plant and their environmental conditions are different. For more information, go to www.biobizz.com.

NUTRIENT SCHEDULE

*Open the card to see how to hatch the seeds!

ROOT·JUICE™

ORGANIC STIMULANTS

- ✓ Derived from premium humic acid and seaweed
- ✓ Encourages vigorous root development
- ✓ Prepares the plant to absorb nutrients more quickly

TOP·MAX™

ORGANIC STIMULANTS

- ✓ Flowering strengthener (size and weight)
- ✓ Improvement of nutrient uptake
- ✓ Sweeter, smooth tasting crops

ALG·A·MIC™

ORGANIC STIMULANTS

- ✓ Rescue in case of overfeeding, deficiencies, diseases or fluctuations in temperature
- ✓ Ensures green leaves
- ✓ Revitalising product with a low level of NPK

Wash your hands at every step

*Before nutrient schedule
**Start with nutrient schedule

HATCHING THE SEEDS*

- 

Put the seeds in water. After 24 hrs., the seeds sink to the bottom.
- 

After this, put the seeds in a wet paper towel and store the seeds in a warm and dark place for 24 hrs. again.
- 

Now the seeds will have little roots. Put the seeds with the roots down in Light-Mix®, make a hole of 1 cm. deep and cover it with a bit of soil.
- 

Moisturize the soil and provide appropriate light and warmth.
- 

For two weeks give only water.

TIP! You can also use Coco-Mix™, Jiffy or Root-Plug for seeds. **Don't use All-Mix® for seedlings!**

TIP! Add a few drops of Root-Juice™, Acti-Vera™ or Alg-A-Mic™ in the feeding water after you've put it in Light-Mix®.

VEGETATIVE PHASE**

- 

Your seedling is now about 10-15 cm. high and has 2-4 leaves.
- 

You can start with Bio-Heaven™, 1-2ml per liter, for All-Mix® and Light-Mix® users.
- 

If you want to switch to All-Mix®: this is the time to replant!
- 

Water your plants 1-3 times per week. Remember: a bit less water is always better than too much.

TIP! To check if your plant is thirsty: put your finger in the soil, if it sticks, you don't have to water yet. If you want to know exactly when you should water: buy a soil humidity meter.

TIP! In the second week of the vegetative phase, you can start with Bio-Grow® or Fish-Mix™ (=same dosages as Bio-Grow®), 1ml per liter.

TIP! Use Alg-a-Mic™ as a foliar spray: 1ml per liter water. Spray the top and bottom of the leaves until run-off / 1-2 times per week. Stop foliar feeding in the 2nd week of flowering.

FLOWERING PHASE

- 

Use dosages for Alg-a-Mic™ and Top-Max™ as indicated in our nutrient schedule.
- 

Use Biobizz® nutrients every time you water the plants, up to 1-2 weeks before harvest.

TIP! Use Root-Juice™ (3-4ml per liter) in the first two weeks of flowering, for an optimal boost of the flowering process.

TIP! Indoor crops develop best under constant climate conditions: 18°-25°C, at 60% humidity

TIP! Use Bio-Grow® and Bio-Bloom™ in this period; your plants will be stimulated AND fertilized.

FLUSHING

- 

In this period, you feed with just water. Stop using Biobizz® products.
- 

If you choose one week of flushing: water your plants till run-off, 3 times a week. You are basically 'washing' the soil.
- 

If you choose two weeks of flushing: water with the normal amount of water, like you've done in the weeks before, 2-3 times a week.
- 

The leaves of your plants might turn yellow. This is normal, so don't panic.

HARVEST

You did it! Time to enjoy some genuine organic quality!
