

This step-by-step plan gives an idea of how you could grow with the Outdoor-Pack. It is only a guideline, there are many ways to grow.

### TRY-PACK™ OUTDOOR

Try-Pack™ Outdoor suits you when the climate in your region is suitable and growing outside is your thing. It's designed to be easy to handle and makes it simple to gain experience using organic fertilizers. Fish-Mix™ boosts all the natural minerals and microorganisms in the soil and stimulates the production of useful bacteria, its potent stuff.

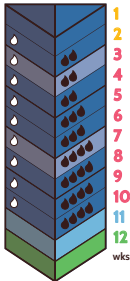

If you're growing for the first time, just stick with the products in this pack. Get experienced, learn to understand the plants and keep it simple. When in doubt, go easy. The second time you can add the products we mention as optional. Results may vary since every plant and their environmental conditions are different. For more information, go to [www.biobizz.com](http://www.biobizz.com)

## NUTRIENT SCHEDULE

\*Open the card to see how to hatch the seeds!

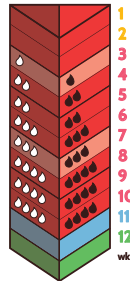

### FISH-MIX™ ORGANIC FERTILIZERS

- ✓ Accelerates the growth of all living organisms in the substrate
- ✓ Stimulates the production of microorganisms and useful bacteria
- ✓ Transforms poor quality earth into rich, fat soil

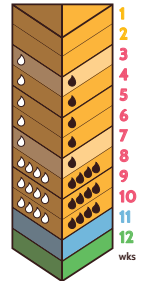

### BIO-BLOOM™ ORGANIC FERTILIZERS

- ✓ For exuberant flowers that lead to tasty fruits
- ✓ Optimum blend of nitrogen, phosphorous and potassium
- ✓ An independently working fertilizer
- ✓ Trace elements included

### TOP-MAX™ ORGANIC STIMULANTS

- ✓ Flowering strengthener (size and weight)
- ✓ Improvement of nutrient uptake
- ✓ Sweeter, smooth tasting crops

💡 Flip open for tips and tricks on growing with the Try-Pack™ Outdoor

Wash your hands at every step

*\*Before nutrient schedule*  
**\*\*Start with nutrient schedule**

## HATCHING THE SEEDS\*

-  Put the seeds in water. After 24 hrs., the seeds sink to the bottom.
-  After this, put the seeds in a wet paper towel and store the seeds in a warm and dark place for 24 hrs. again.

-  Now the seeds will have little roots. Put the seeds with the roots down in Light•Mix®, make a hole of 1 cm. deep and cover it with a bit of soil.
-  Moisturize the soil and provide appropriate light and warmth.
-  For two weeks give only water.

**TIP!** You can also use Coco•Mix™, Jiffy or Root-Plug for seeds. **Don't use All•Mix® for seedlings!**

**TIP!** Add a few drops of Root•Juice™, Acti•Vera™ or Alg•A•Mic™ in the feeding water after you've put it in Light•Mix®.

## VEGETATIVE PHASE\*\*

Outdoor

-  Instead of using our grow schedule, you follow the cycle of summer and autumn.
-  If you use Light•Mix®: When your seedling is 10-15cm high and has 2-4 leaves, start with 2ml Fish•Mix™ per liter.
-  If you want to switch to All•Mix®: this is the time to replant!
-  Until the end of summer, use only Fish•Mix™. Increase the dosage with 1ml per liter, depending on the size of the plants ±20-30 cm = 0,5-1ml / 30-50 cm = 1-2ml / 50-70 cm = 2-3ml / 70-90 cm = 3-4ml / 90+ cm = 4-5ml. Be modest; rather a bit less than too much nutrients.
-  As soon as your plants start to flower, lower the dosage of Fish•Mix™ (max. 2ml per liter).

## FLOWERING PHASE

-  **Outdoor:** Start using Bio•Bloom™ and Top•Max™, 1ml per liter. Every week, increase it with 1ml per liter. Max. dosage (!) is 5ml per liter.
-  **Indoor:** Use dosages for Fish•Mix™, Bio•Bloom™ and Top•Max™ as indicated in our nutrient schedule. Bio•Grow® dosages are the same as for Fish•mix™.
-  Use Biobizz® every time you water the plants.
-  Continue with the nutrients up to 1-2 weeks before harvest time.

**TIP!** Indoor crops develop best under constant climate conditions: 18°-25°C, at 60% humidity.

## VEGETATIVE PHASE\*\*

Indoor

-  The Outdoor-Pack can also be used for growing indoors!
-  Your seedling is now about 10-15 cm. high and has 2-4 leaves.
-  If you want to switch to All•Mix®: this is the time to replant!
-  In the last week of this phase, you can start with Fish•Mix™, 2ml per liter for Light•Mix®, 1ml per liter for All•Mix®.
-  Water your plants 1-3 times per week. Remember: a bit less water is always better than too much.

## FLUSHING

-  In this period, you feed with just water. Stop using Biobizz® products.
-  If you choose one week of flushing: water your plants till run-off, 3 times a week. You are basically 'washing' the soil.
-  If you choose two weeks of flushing: water with the normal amount of water, like you've done in the weeks before, 2-3 times a week.
-  The leaves of your plants might turn yellow. This is normal, so don't panic.

**TIP!** To check if your plant is thirsty: put your finger in the soil, if it sticks, you don't have to water yet. If you want to know exactly when you should water: buy a soil humidity meter.

## HARVEST

You did it! Time to enjoy some genuine organic quality!

**TIP!** Use Fish•Mix™ as a foliar spray during the vegetative phase; 1-2 ml per liter water / 1-2 times per week. Stop foliar feeding in the 2nd week of flowering.
